

Step 1: Set Up Back4App

The screenshot shows a web browser window with the Back4App dashboard. The browser's address bar displays the URL `https://dashboard.back4app.com/apps/new`. The dashboard header includes the Back4App logo, navigation links for 'AI Agent', 'My Apps', 'Dashboard', 'Docs', and 'Support', a user greeting 'Hello, 2022mt12255', and a 'NEW APP' button. The main content area features a white form for creating a new app. The form has a blue background and contains the following elements:

- App name:** A text input field containing the value 'flutter_assignment'.
- Database:** A section with an information icon and two radio button options:
 - ☒ PostgreSQL - BETA
 - ☐ NoSQL Database
- reCAPTCHA:** A verification box with a green checkmark, the text 'I'm not a robot', and the reCAPTCHA logo and text.
- CREATE:** A large green button at the bottom of the form.

In the bottom right corner of the dashboard, there is a 'Help' button with a question mark icon. The Windows taskbar is visible at the bottom of the screen, showing the search bar and various application icons.

Create a class in Back4App named Task with columns title (String) and description (String).

Add a new class

Create a new collection of objects.

What should we call it? Don't use any special characters, and start your name with a letter.	<input type="text" value="taskList"/>
What type of class do you need?	Custom ▼
Add in Protected mode Your class's objects are protected by default. Client read/write access will only be granted when specified by your CLPs/ACLs security rules.	<input type="radio"/> Protected
Add in Public mode Your class's objects are public by default. Any client has read/write access granted, which is convenient for development. We strongly recommend strengthening the security with CLPs/ACLs rules before moving to production.	<input checked="" type="radio"/> Public Read and Write enabled

Or find a public dataset to connect

e.g. jobs, countries, industries, colors, zip codes and more...

back4app.com/database

Add a new column

Store another type of data in this class.

What type of data do you want to store?

String ▼

What should we call it?

Don't use any special characters, and start your name with a letter.

Title

What is the default value?

If no value is specified for this column, it will be filled with its default value.

Set a default value here

Is it a required field?

When true this field must be filled when a new object is created.

No ☒ Yes

Never mind, don't.

Important: if you develop apps in China, check out [using Flutter in China](#).

Help

1. Download the following installation bundle to get the latest stable release of the Flutter SDK:

flutter_windows_3.16.0-stable.zip

For other release channels, and older builds, check out the [SDK archive](#).

2. Extract the zip file and place the contained flutter in the desired installation location for the Flutter SDK (for example, %USERPROFILE%\flutter, D:\dev\flutter).

Warning: Do not install Flutter to a path that contains special characters or spaces.

Warning: Do not install Flutter in a directory like C:\Program Files\ that requires elevated privileges.

You are now ready to run Flutter commands in the Flutter Console.

You can find general documentation for Flutter at: https://docs.flutter.dev/
Detailed API documentation is available at: https://api.flutter.dev/
If you prefer video documentation, consider: https://www.youtube.com/c/flutterdev

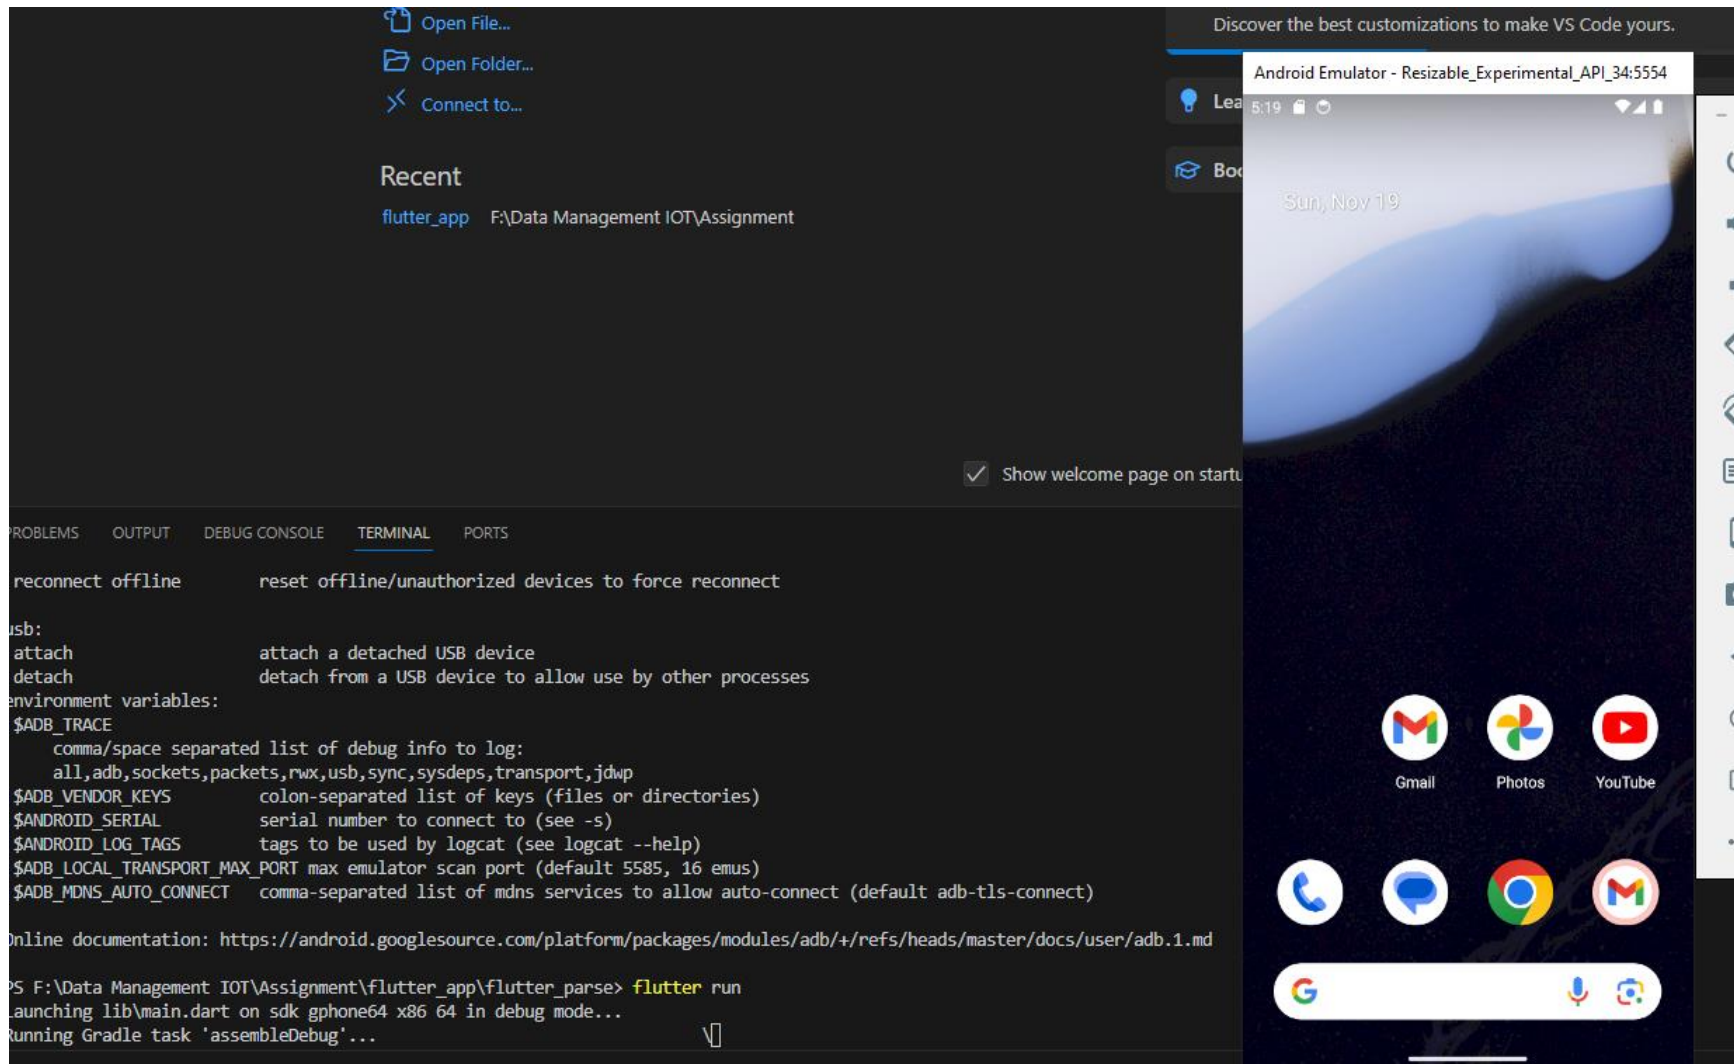

In order to run your application, type:

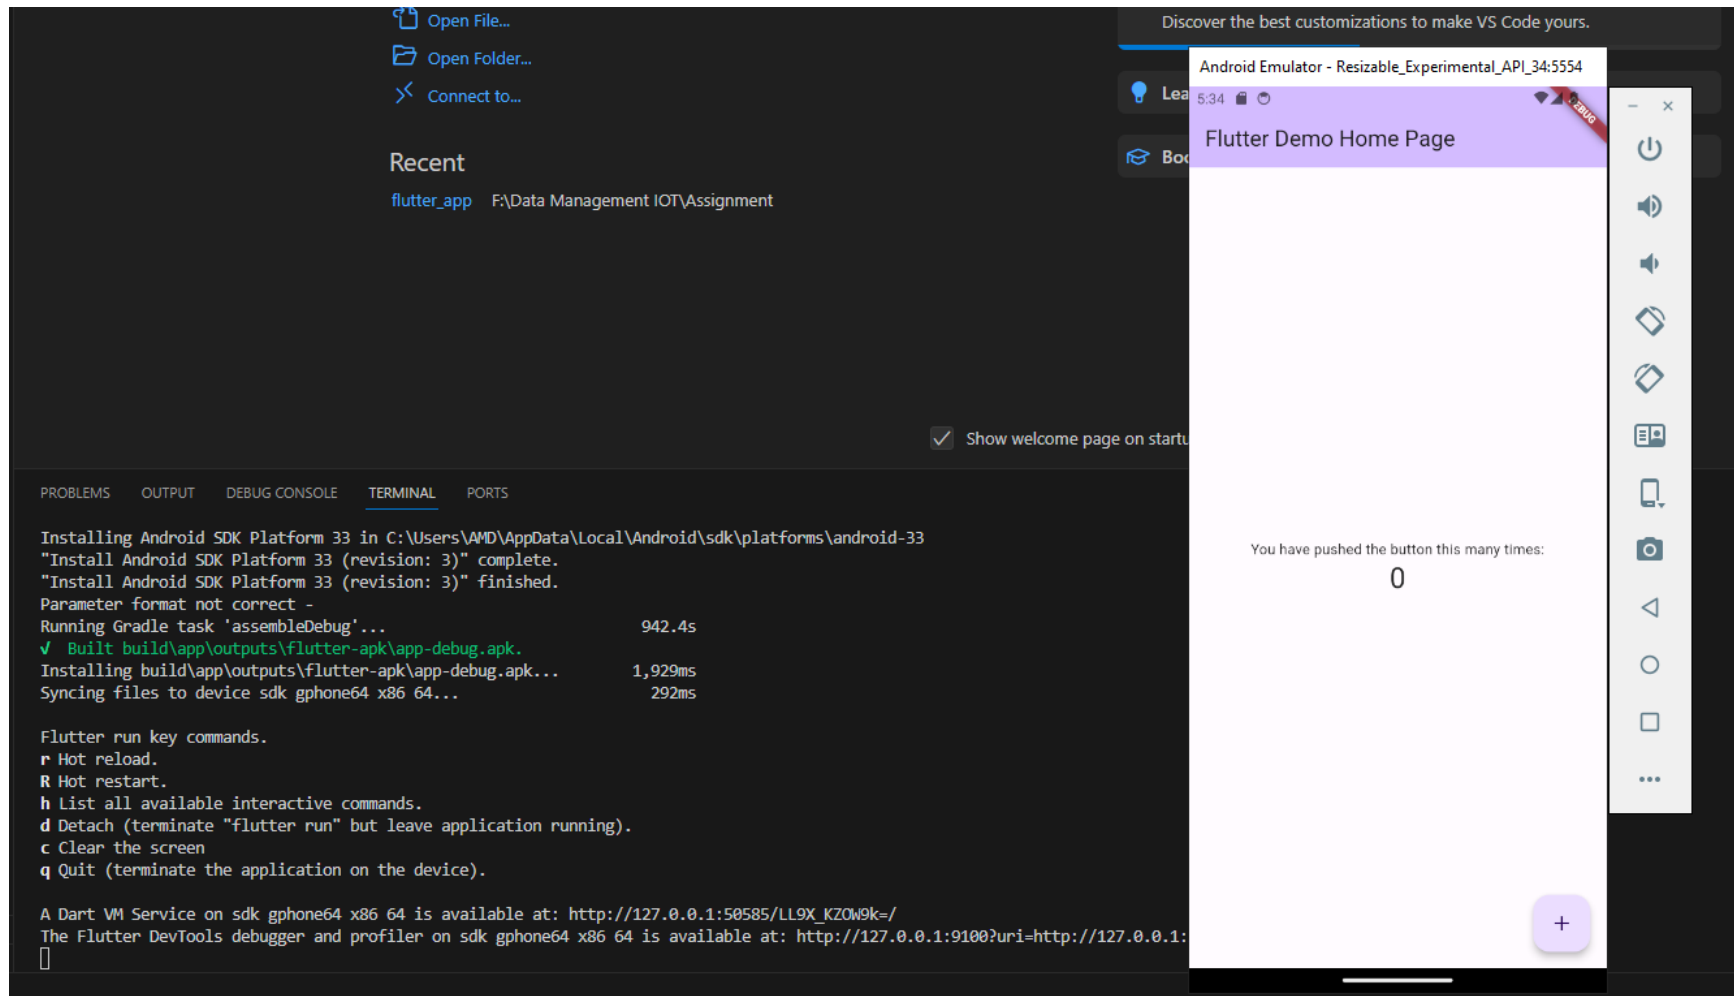

$ cd flutter_parse
$ flutter run

Your application code is in flutter_parse\lib\main.dart.

PS F:\Data Management IOT\Assignment\flutter_app> █
```

Add the required dependencies to your pubspec.yaml file.

- flutter pub add parse_server_sdk_flutter

```
# versions available, run `flutter pub outdated`.
dependencies:
  flutter:
    sdk: flutter

  # The following adds the Cupertino Icons font to your application.
  # Use with the CupertinoIcons class for iOS style icons.
  cupertino_icons: ^1.0.2
  parse_server_sdk_flutter: ^7.0.0

dev_dependencies:
  flutter_test:
    sdk: flutter
```

Initialize the Parse SDK in your Flutter app.

App Keys

These are the unique identifiers used to access this app.

Application ID Main ID that uniquely specifies this app. Used with one of the keys below.	RG0qrgamYLfeNjPN605JFTgTQx0FzzwOLjrTYwBz
Client key Use this in consumer clients, such as the iOS or Android SDKs.	pss0XrSMpivxpdrTJGpBb6YQe56KxPbKktJMxqVf

App Information

Update general information about your app.

App name

Parse Version

4.5.0

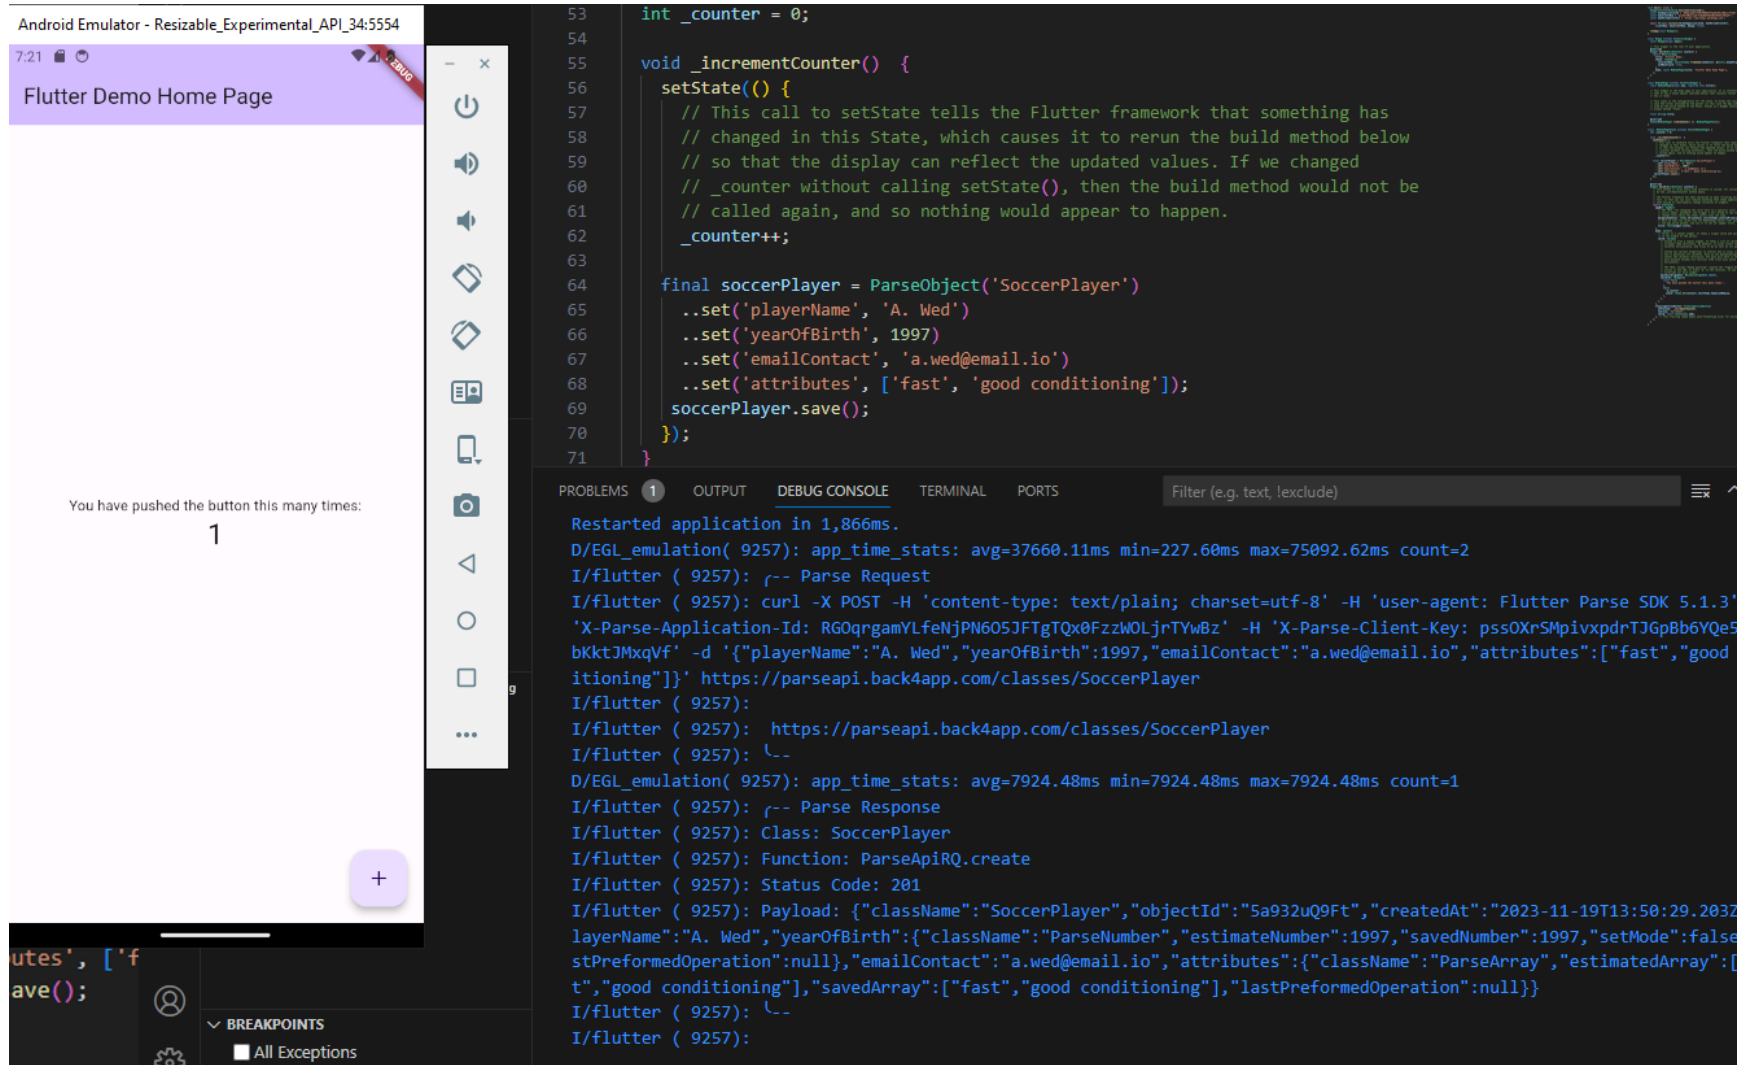

Integration check using soccerplayer Class example to test of sending data upon button click:

```
import 'dart:async';  
import 'package:flutter/material.dart';  
import 'package:parse_server_sdk_flutter/parse_server_sdk_flutter.dart';
```

Run | Debug | Profile

```
void main() async {  
  WidgetsFlutterBinding.ensureInitialized();  
  const keyApplicationId = 'RGOqrgamYLfeNjPN605JFTgTQx0FzzWOLjrTYwBz';  
  const keyClientKey = 'pssOXrSMpivxpdrTJGpBb6YQe56KxPbKktJMxqVf';  
  const keyParseServerUrl = 'https://parseapi.back4app.com';  
  
  await Parse().initialize(keyApplicationId, keyParseServerUrl,  
    clientKey: keyClientKey, debug: true);  
  
  runApp(const MyApp());  
}
```

```
void _incrementCounter() {  
  setState(() {  
    // This call to setState tells the Flutter framework that something has  
    // changed in this State, which causes it to rerun the build method below  
    // so that the display can reflect the updated values. If we changed  
    // _counter without calling setState(), then the build method would not be  
    // called again, and so nothing would appear to happen.  
    _counter++;  
  
    final soccerPlayer = ParseObject('SoccerPlayer')  
      ..set('playerName', 'A. Wed')  
      ..set('yearOfBirth', 1997)  
      ..set('emailContact', 'a.wed@email.io')  
      ..set('attributes', ['fast', 'good conditioning']);  
    soccerPlayer.save();  
  });  
}
```

Step 3: Task List

Create a screen in your Flutter app to display a list of tasks.

Using static data :

Implement a function to fetch tasks from Back4App using the Back4App API.

Server URL and Live Query

In this section, you can enable a custom Server URL that can be used for real-time database.

☒ Activate your Back4App subdomain

Subdomain name

flutterassignment . b4a.io ▼

☒ Activate Live Query

- ☐ SoccerPlayer
- ☐ _User
- ☐ spatial_ref_sys
- ☒ taskList

BACK

Step 4: Task Creation (10 points)

Create a screen for adding new tasks.

Add Task button code.

```

lib > main.dart
365 floatingActionButton: FloatingActionButton(
366   onPressed: () {
367     showDialog(
368       context: context,
369       builder: (context) => AlertDialog(
370         title: const Text('Add Task'),
371         content:
372           Column(mainAxisSize: MainAxisSize.min, children: <Widget>[
373             TextFormField(
374               controller: taskTitleController,
375               decoration: const InputDecoration(
376                 border: OutlineInputBorder(),
377                 hintText: 'Enter Task Title',
378               ), // InputDecoration
379             ), // TextFormField
380             TextFormField(
381               controller: taskDescController,
382               decoration: const InputDecoration(
383                 border: OutlineInputBorder(),
384                 hintText: 'Enter Task Description',
385               ), // InputDecoration
386             ), // TextFormField
387           ]), // <Widget>[] // Column
388         actions: [
389           TextButton(
390             onPressed: () async {
391               const snackBar = SnackBar(
392                 content: Text("Cancelled"),
393                 duration: Duration(seconds: 2),
394               ); // SnackBar
395               ScaffoldMessenger.of(context)
396                 ..removeCurrentSnackBar()
397                 ..showSnackBar(snackBar);
398               Navigator.pop(context, true);
399             //});
400           },
401           child: const Text('Cancel')), // TextButton
402           TextButton(
403             onPressed: () async {
404               addToDo();
405               Navigator.pop(context, true);
406             //});
407           },
408           child: const Text('Add Task')), // TextButton
409         ],
410       ), // AlertDialog
411     );
412   },

```

```

void addToDo() async {
  if (taskTitleController.text.trim().isEmpty) {
    ScaffoldMessenger.of(context).showSnackBar(const SnackBar(
      content: Text("Title can not be blank"),
      duration: Duration(seconds: 2),
    )); // SnackBar
    return;
  }
  await saveTask(taskTitleController.text, taskDescController.text);
  ScaffoldMessenger.of(context).showSnackBar(const SnackBar(
    content: Text("Task added"),
    duration: Duration(seconds: 2),
  )); // SnackBar
  taskTitleController.clear();
  taskDescController.clear();
}

```

```

Future<void> saveTask(String title, String description) async {
  final todo = ParseObject('taskList')
    ..set('Title', title)
    ..set('Description', description)
    ..set('Completed', false);
  await todo.save();
}

```

Implement functionality to create and save tasks to Back4App.

```
void addToDo() async {  
  if (taskTitleController.text.trim().isEmpty) {  
    ScaffoldMessenger.of(context).showSnackBar(const SnackBar(  
      content: Text("Title can not be blank"),  
      duration: Duration(seconds: 2),  
    )); // SnackBar  
    return;  
  }  
  await saveTask(taskTitleController.text, taskDescController.text);  
  ScaffoldMessenger.of(context).showSnackBar(const SnackBar(  
    content: Text("Task added"),  
    duration: Duration(seconds: 2),  
  )); // SnackBar  
  taskTitleController.clear();  
  taskDescController.clear();  
}
```

Verify that newly created tasks appear in the task list.

Step 5: Task Details

Add a feature to view task details when a task is tapped in the task list. Display the title and description of the selected task.

```
return ListTile(  
  onTap: () async {  
    showDialog(  
      context: context,  
      builder: (context) => AlertDialog(  
        title: Text(  
          tiledata.get<String>('Title')!), // Text  
        content: Text(tiledata.get<String>(  
          'Description') ==  
            null  
          ? ''  
          : tiledata.get<String>(  
            'Description')!), // Text  
      )); // AlertDialog  
  },  
);
```

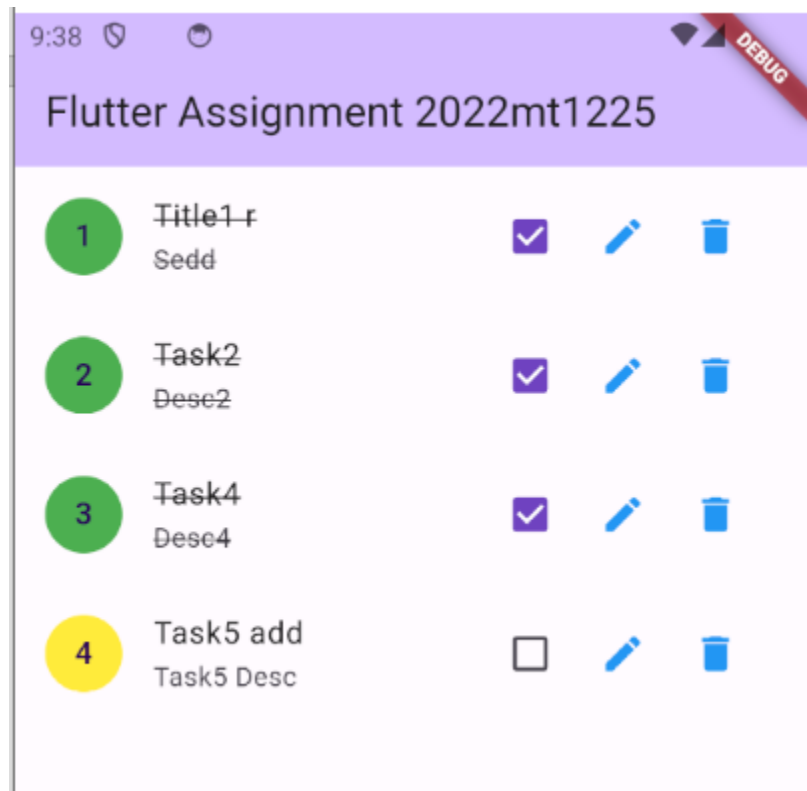

Add a feature to edit and update existing tasks.

Update Task Completed Status:

```
children: [  
  Checkbox(  
    value:  
      tiledata.get<bool>('Completed'),  
    onChanged: (value) async {  
      await updateDone(  
        tiledata.objectId!, value!);  
      }), // Checkbox
```

```
Future<void> updateDone(String id, bool completedFlag) async {  
  var todo = ParseObject('taskList')  
    ..objectId = id  
    ..set('Completed', completedFlag);  
  await todo.save();  
}
```

Upon checkbox click

Upon edit button click

Implement a feature for task deletion.

```

IconButton(
  icon: const Icon(
    Icons.delete,
    color: Colors.blue,
  ), // Icon
  onPressed: () async {
    await deleteTodo(tiledata.objectId!);
    //setState(() {
    const snackBar = SnackBar(
      content: Text("Task deleted!"),
      duration: Duration(seconds: 2),
    ); // SnackBar
    ScaffoldMessenger.of(context)
      ..removeCurrentSnackBar()
      ..showSnackBar(snackBar);
    //});
  },
) // IconButton

```

```

Future<void> deleteTodo(String id) async {
  var todo = ParseObject('taskList')..objectId = id;
  await todo.delete();
}
